

AUSTRALIA MARKET EDITION

304 Stainless Steel Escape-Resistant Kennel Systems

Custom modular animal housing for boarding, breeding, shelters and veterinary projects.

304 STAINLESS STEEL | CUSTOM DIMENSIONS | FACTORY-DEVELOPED SAFETY LATCH

Built Around Secure Daily Use

A configurable stainless-steel enclosure platform developed for professional animal-care environments. The system combines ventilated visibility, solid lower barriers and a purpose-built external latch.

- Escape-resistant latch** The operating mechanism is positioned for staff access and designed to reduce accidental opening by animals. Locking geometry can be adapted to the gate and project use case.
- Modular configuration** Gate panels, solid dividers, ventilated mesh sections and roof panels can be configured around room layouts and operating workflows.
- Washable stainless surfaces** SUS304 stainless steel and solid lower infill panels support routine cleaning in wet, high-use commercial environments.
- Flexible OEM production** Small-batch manufacture, private-label supply and drawing-based customisation are available for distributors, installers and project partners.

Panel system	Installed latch	Lock development
		
Modular gate and panel arrangement	External operating point close to the gate frame	Prototype fitting before installation

Reference Configurations

Three reference packages make project discussions faster while preserving full dimensional and hardware customisation.

Configuration	Best fit	Core build	Available options
Secure Standard	Breeding and boarding	SUS304 frame, 0.8 mm solid lower infill, ventilated mesh, roof mesh, escape-resistant latch	Custom widths, gate direction, divider layout and feeding access
Hygiene Pro	Pet resorts, shelters and veterinary holding	Secure Standard plus more solid separation and workflow-specific access	Full-height divider, feeding door, splash-control details and upgraded sheet thickness
High-Security	High escape-risk and working-dog areas	Reinforced gate structure with project-specific locking geometry	Multi-point latch, closer mesh, protected hardware and anti-lift hinge option

Suggested Starting Dimensions

Overall height 1900 mm or 2100 mm, subject to project and local requirements.

Gate width 900 mm reference module; custom widths available.

Isolation panels 1200 mm or 1500 mm reference widths; layouts can combine solid and ventilated sections.

Project sizing Floor area, anchoring, drainage, mesh spacing and emergency access are confirmed for each installation.

Specification note Reference configurations are not a statement of regulatory certification. Final acceptance remains subject to local project review.

Working with Australian Partners

The preferred route is business-to-business supply through an Australian distributor, kennel installer or animal-facility project partner.

Project Workflow

Share the layout The partner supplies a site sketch, reference dimensions or a preferred panel schedule.

Confirm the build Panel arrangement, material details, latch style, feeding access and fixing points are agreed before production.

Approve the sample A gate module, latch sample or small pilot project can be used to confirm fit, operation and finish.

Coordinate production and export Qingdao Tianze Gangmao coordinates production, order contracting, payment, shipment and export documentation for each project.

Best-Fit Partner Profiles

Kennel installers Add a stainless, higher-security option without operating their own fabrication workshop.

Animal equipment distributors Offer private-label kennel gates, panels and enclosure kits to existing customers.

Boarding and shelter projects Order project-specific configurations for expansion, replacement or new facilities.

Veterinary fit-out partners Use stainless holding enclosures as part of wider clinic or animal-care projects.

Product and Claim Boundaries

Products are custom-manufactured animal-housing components. Material grade, dimensions and agreed features are documented per order. No claim of Australian certification, absolute escape-proof performance or medical-device status is made without project-specific evidence.
